- **UP TO 100 bar PRESSURE / SCALED PROCESS + TEMPERATURE**
- **DUAL CHANNEL (4 to 20) mA LOOP POWERED**
- **DISPLAY OPTION**
- **USB AND NFC INTERFACE**
- **DATA LOGGER (USB or COMPATIBLE ANDROID DEVICE)**

- **INTRODUCTION**

Display version shown.

The SEM710PM and SEM710PM/DP are dual channel loop powered transmitters with sealed gauge pressure ranges up to 100 bar, plus temperature.

A datalogging feature is provided via either USB or NFC (suitable Android device) connectivity.

The logging function can record pressure or a scaled process value with the temperature of the medium.

The SEM710PM/DP version can display pressure in various units, a scaled process value (custom units) and temperature (°C or °F) on a 6-digit LCD display.

➤ **FEATURE HIGHLIGHTS**

OUTPUTS

Dual channel two wire (4 to 20) mA outputs: channel 1 powers the instrument; channel 2 (use optional) is isolated from channel 1 and may be used as a repeater or to send another process variable. Both channels can be sourced to either temperature, pressure in various units, or a custom process value, rescaled in any unit using a 22-step linearisation tool (for tank level or similar).

DATA LOGGING FUNCTION

SEM710PM series also provides a powerful data logging function. The log points can be set up to 3600 for the SEM710PM-DP (2000 points for the SEM710PM) points; each point is time and date-stamped together with pressure/process value, temperature and loop power condition on Channel 1. The SEM710PM series can continue to record time-stamp data for over 4 hours on the loss of the loop supply and resume on repower.

CALIBRATION and USER-LINEARISATION

A 5-point calibration can be applied to the pressure sensor using the USBSpeedLink software.

As well as a straight-line profile, up to 22 points (X,Y interpolation) of user-linearisation are available for creating custom curves and corrections. An example of use: volume calculation in a non-linear tank.

NFC CONFIG and DISPLAY

Using a suitable Android device running the Status Instruments free NFC Configuration app, the process values of the non-display SEM710PM version can be shown.

The NFCLink Config app. can also be used to programme both the SEM710PM and SEM710PM-DP version
